Optometrist

We are pleased to offer the Easyscan 3 minute eyecare test! It is a non-invasive, digital imagining of the interior of the eye and its underlying tissues. This scan helps us to better determine the damage caused by the harmful blue light emitted from modern black-lit devices, as well as give the doctor an opportunity to find and prevent other eye conditions and diseases.

Recent studies show that oxidative damage to the Retinal Pigment Epithelium (RPE) layer is enhanced in response to blue light and may result in earlier onset macular degeneration. Getting a scan regularly with your annual eye exam allows the doctor to view any changes that may have occurred over time.

In conjunction with the Routine Eye Exam, there is an additional \$39 fee for this scan. **INSURANCE DOES NOT COVER THIS TEST.**

- YES, I would like to have the Easy Scan today.
- NO, I decline today.
- MAYBE, I would like to discuss with doctor.
